About me

I'm a fast-learning, impact-driven developer who thrives on solving complex problems with smart, efficient solutions. I break challenges into actionable parts, analyze root causes, and deliver clean, scalable code—on time, without compromising quality.

With a strong foundation in full-stack development (MERN, React Native), I adapt quickly to new libraries and frameworks and architect robust systems from scratch. I've led teams, mentored juniors, and built real-world apps with modern UI features like Swiper carousels, toast notifications, and lightboxes. I'm a confident communicator, and skilled at explaining logic, discussing architecture, and collaborating effectively across teams. Whether it's debugging a tricky issue, optimizing SEO, or crafting compelling content for tech services, I bring clarity, focus, and a founder's mindset to every project.
